

BUST A MYTH

about skin cancer

Many people think solariums are a safe way to tan. They're not. Others believe you can't get burnt on a cloudy day. You can. There are many misconceptions about the sun and our skin. We have listed the top 10 myths about skin cancer online and want you to choose one and show Australia the facts.

If you're aged between 12 and 17 years, enter a short film, image or creative writing piece that 'busts a myth' and be in the running for some great prizes.
